DATASET

No dataset provided.

BACKGROUND

- The National Cybercrime Reporting Portal is the centralized platform serving the whole country.
- It lets citizens file complaints, enables LEAs to act on them, and supports banks/financial institutions in follow-up action, with daily reports and graphs.
- The portal receives approximately 8,000 complaints per day — a volume that has increased manifold in recent months and continues to rise.
- This scale requires a shift from a reactive posture to a proactive approach to cybercrime.

DESCRIPTION

- Predicts likely cash-withdrawal locations, enabling proactive interventions by LEAs at the state and local level, coordinated by I4C.
- Interventions can include deploying special teams or alerting local banks and ATMs in high-risk areas.
- Generated intelligence also assists banks/FIs via the Citizen Financial Cyber Fraud Reporting and Management System — enabling faster fund blocking and better recovery chances.
- Real-time, actionable intelligence-sharing across jurisdictions helps LEAs and banks respond to cyber threats faster and more effectively.
- Creates a powerful, data-driven defence against financial cyber fraud, strengthening India's cybersecurity posture and improving law-enforcement/financial-entity coordination.

KEY DELIVERABLES

- **Predictive Analytics Engine** – AI/ML-based system to analyse historical cybercrime and financial data to predict potential withdrawal hotspots; includes pattern detection, geospatial risk modelling, and real-time alerts.
- **Risk Heatmap Dashboard** – GIS-enabled dashboard visualizing real-time and potential risk zones with drill-down filters by time, location, and crime category.
- **Law Enforcement Interface** – Secure interface for investigators to access alerts, intelligence reports, and evidence documentation.
- **Alert & Notification System** – Real-time notifications to law enforcement, banks, and I4C officers via SMS, email, API, or dashboard triggers.
